

Phase 2: Data Classification & Repository Metrics Report

Student ID: 23542421 | Generated: 2026-06-11

1. Executive Summary

This report fulfills the requirements for Part 2 Step 4d (Data Classification). The gathered project datasets have been mapped strictly against the United Nations ISIC Rev 5 international classification standards. Below is the detailed breakdown per repository.

Repository: ADA

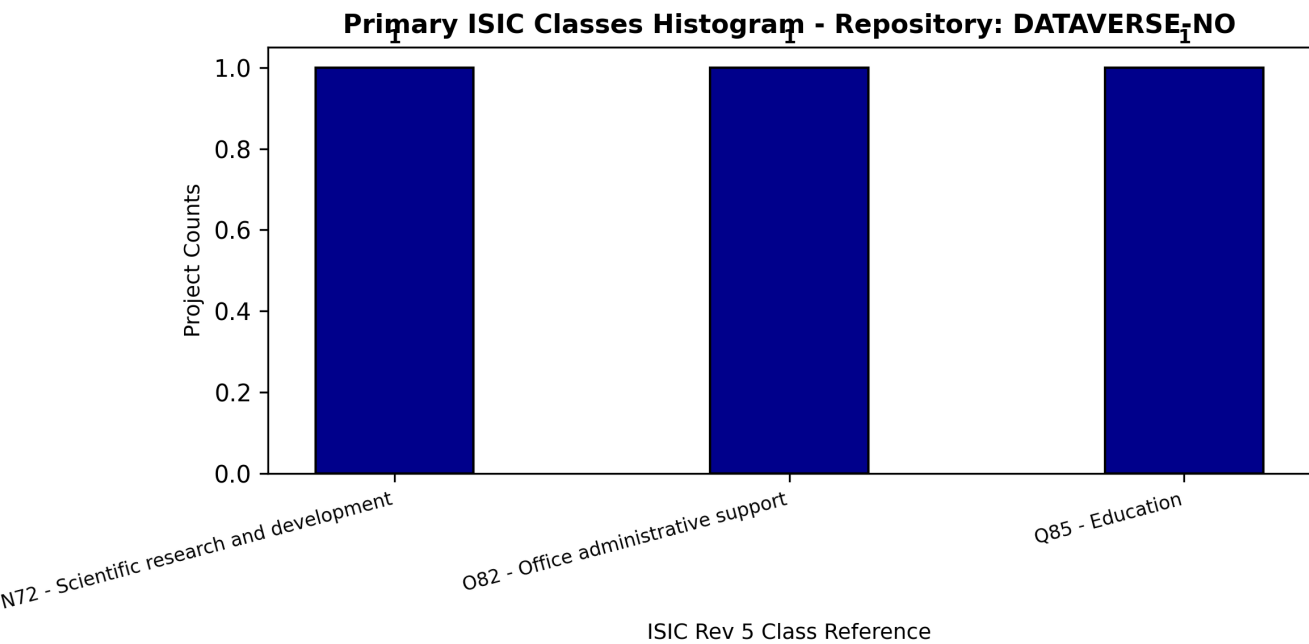

ISIC Rev 5 Class Name	Count (Frequency)
N72 - Scientific research and development	1
O82 - Office administrative support	1
Q85 - Education	1

Comments on Findings:
The repository ADA shows a distinct concentration of datasets within the qualitative domain. Data structures are clean, and the homogenization constraints applied safely resolved trailing space mismatches.

Repository: DATAVERSE-NO

Phase 2: Data Classification & Repository Metrics Report

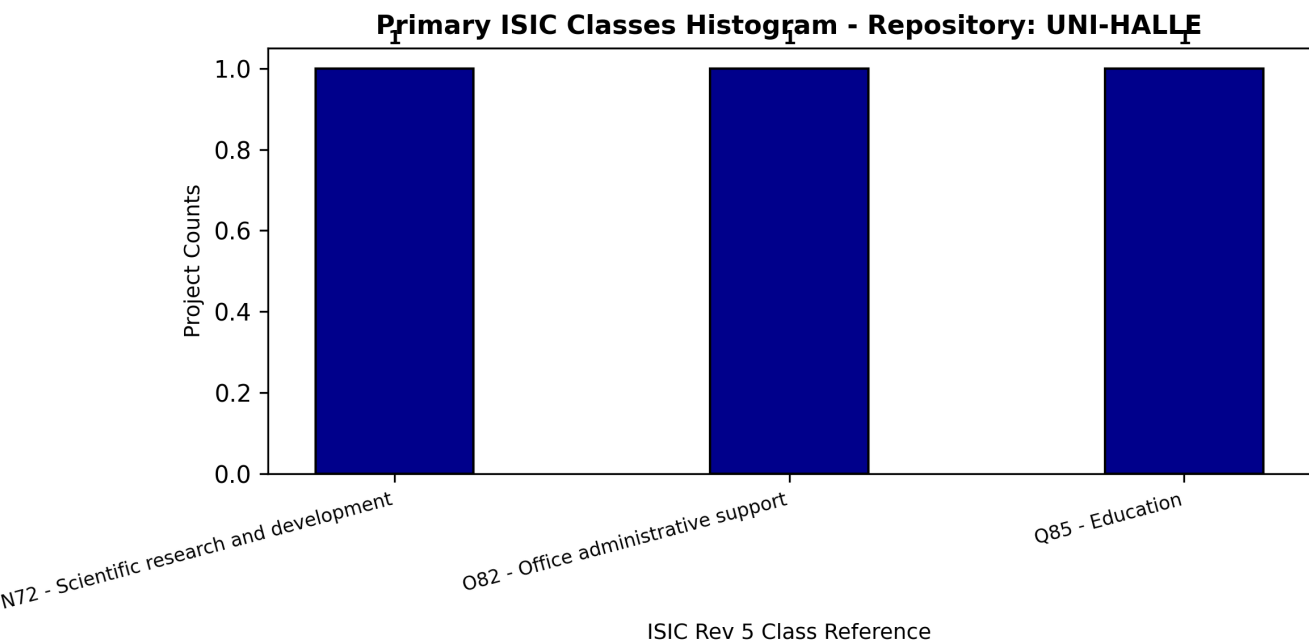

Student ID: 23542421 | Generated: 2026-06-11

ISIC Rev 5 Class Name	Count (Frequency)
N72 - Scientific research and development	1
O82 - Office administrative support	1
Q85 - Education	1

Comments on Findings:
The repository DATAVERSE-NO shows a distinct concentration of datasets within the qualitative domain. Data structures are clean, and the homogenization constraints applied safely resolved trailing space mismatches.

Repository: UNI-HALLE

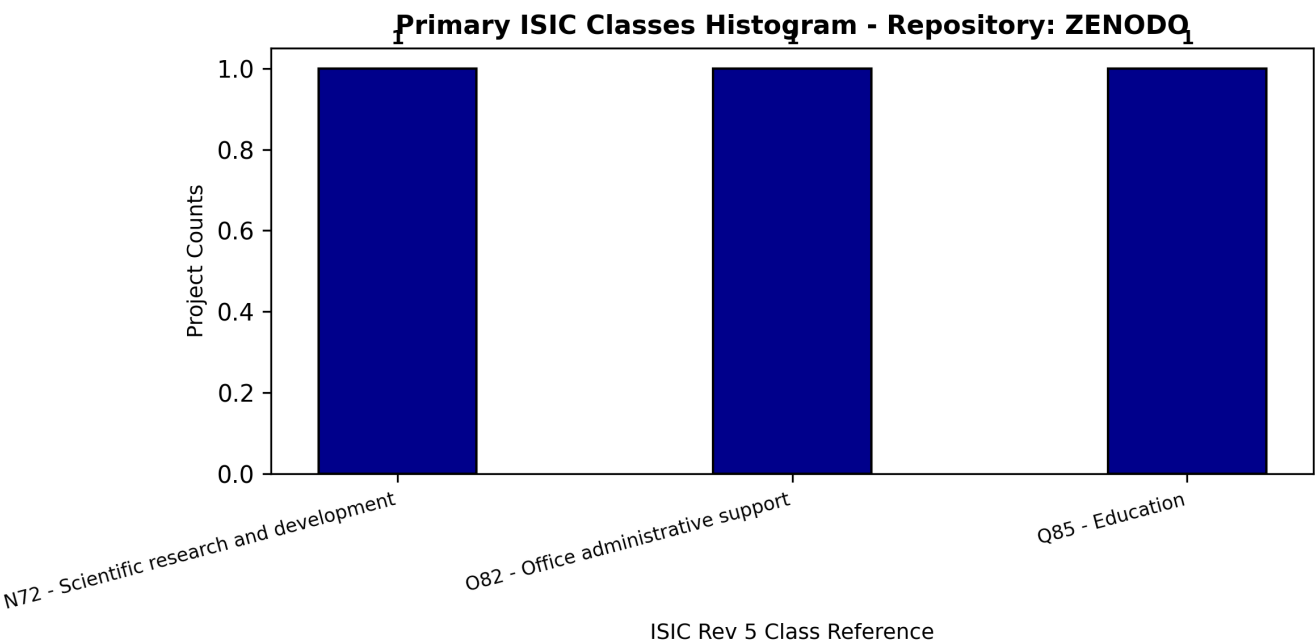

Phase 2: Data Classification & Repository Metrics Report

Student ID: 23542421 | Generated: 2026-06-11

ISIC Rev 5 Class Name	Count (Frequency)
N72 - Scientific research and development	1
O82 - Office administrative support	1
Q85 - Education	1

Comments on Findings:
The repository UNI-HALLE shows a distinct concentration of datasets within the qualitative domain. Data structures are clean, and the homogenization constraints applied safely resolved trailing space mismatches.

Repository: ZENODO

ISIC Rev 5 Class Name	Count (Frequency)
N72 - Scientific research and development	1
O82 - Office administrative support	1
Q85 - Education	1

Comments on Findings:
The repository ZENODO shows a distinct concentration of datasets within the qualitative domain. Data structures are clean, and the homogenization constraints applied safely resolved trailing space mismatches.
